

ZF 8HP45 / Chrysler 845RFE Replacement "D" Clutch Piston Tool Kit

The Problem

The ZF 8HP45 and Chrysler 845RFE transmissions are designed with the Planetary and "D" Clutch Drum as an assembly, which houses the "D" Clutch Piston, and held in place by rivets. This design only allows the piston to be replaced by the OEM as an assembly.

The Solution

TransTec have developed a Tool Kit that enables service of this drum to allow replacement of the bonded piston.

- Includes all the necessary components to allow easy and accurate repair
- Make an expensive repair affordable by allowing this drum piston to be replaced as opposed to buying a whole new assembly
- To be used in conjunction with TransTec "D" Clutch Piston used in Overhaul Kit ZGS-845020 or Piston Kit ZXK-845000

To view a video on how this tool is used search YouTube for ZF8HP45 D-Clutch Piston Tool Kit - TransTec.
